

Vaibhav Sable — Master Knowledge Base & Portfolio

AI Engineer | Generative AI & Agentic AI Specialist · 37 Projects

Personal Information & Bio

Email: vaibhavsable150@gmail.com | **Phone:** +91 9373012758 | **Location:** Pune, Maharashtra, India
GitHub: github.com/Vaibhavsable451 | **LeetCode:** leetcode.com/u/vaibhavsable122

Summary: Vaibhav Sable is an AI Engineer specializing in Large Language Models (LLMs), Generative AI, Agentic AI Systems, Retrieval-Augmented Generation (RAG), and AI Workflow Automation. He combines strong backend engineering (Python, FastAPI, Java, Spring Boot) with multi-agent frameworks (LangChain, LangGraph, n8n, CrewAI) and vector databases (Pinecone, FAISS) to build production-ready, scalable AI solutions.

Technical Skills Overview

- **AI & Generative AI:** LLMs, Agentic AI, Multi-Agent Systems, RAG, Prompt Engineering, Tool Calling, Fine-Tuning.
- **Frameworks & Orchestration:** LangChain, LangGraph, CrewAI, AutoGen, LlamaIndex, n8n, MCP.
- **Vector DBs & RAG:** Pinecone, FAISS, Embeddings, Hybrid Search, Chunking, Document Intelligence.
- **Languages & Backend:** Python, Java, TypeScript, JavaScript, SQL, FastAPI, Spring Boot, REST APIs, Microservices.
- **Cloud & MLOps:** AWS, GCP, Docker, Kubernetes, GitHub Actions, MLflow, Prometheus, Grafana.

Complete Project Portfolio (37 Projects)

Project #01 — RAG Assistant — Groq + LangChain + MCP + AI Governance

Description: Enterprise RAG application built with Groq, LangChain, FAISS, Streamlit, MCP, Presidio, Pytest, GitHub Actions, and Azure App Service. Features governed RAG retrieval, PII redaction, moderation, JSONL audit logging, MCP tool interoperability, automated testing, and CI/CD deployment to Microsoft Azure. Designed to extend a traditional RAG pipeline with security, governance, interoperability, testing, and cloud deployment.

Tech Stack: Python • Groq • LangChain • Streamlit • FAISS • Sentence Transformers • Presidio • MCP • Pytest • GitHub Actions • Azure App Service • AI Governance • RAG

GitHub: <https://github.com/Vaibhavsable451/RAG-Assistant-Enterprise-RAG-with-LangChain-MCP.git> | **Live Demo:** <https://neuraguard-g8fccxd4fmeafbgm.westus3-01.azurewebsites.net/>

Project #02 — NeuraGuard — Enterprise Agentic AI Control & Governance Platform

Description: Enterprise Agentic AI control and governance platform built with FastAPI, Streamlit, LangChain, LangGraph, Pinecone, Groq, and GitHub Actions. Features 11 RAG strategies, 8 LangGraph agents, AI governance, automated red-teaming, observability, AI FinOps, incident self-healing, and human-in-the-loop approval workflows. Designed as a production-oriented platform for securing, evaluating, monitoring, and controlling agentic AI systems.

Tech Stack: Python • FastAPI • Streamlit • LangChain • LangGraph • Pinecone • Groq • RAG • AI Governance • Red Teaming • AI FinOps • Observability • Human-in-the-Loop • AWS EC2 • GitHub Actions • Agentic AI

GitHub: <https://github.com/Vaibhavsable451/NeuraGuard-Enterprise-Agentic-AI-Control-Governance-Platform.git>

Project #03 — AegisAI — Enterprise AI Governance & Agentic RAG Platform

Description: Enterprise-grade Agentic AI governance and RAG platform built with FastAPI, LangGraph, LangChain, Groq, Pinecone, MySQL, Docker, Kubernetes, GitHub Actions, AWS EC2, and MLflow. Features multi-agent query routing, semantic document retrieval, PII redaction, prompt-injection detection, policy enforcement, hallucination detection, explainable risk scoring, JWT/RBAC authentication, observability, MLOps tracking, and production-ready CI/CD deployment. Designed with specialized Router, Retrieval, Compliance, Risk, and Response agents for secure and governed AI query processing.

Tech Stack: Python • FastAPI • LangGraph • LangChain • Groq Llama 3 • Pinecone • Sentence Transformers • MySQL • SQLAlchemy • Presidio • MLflow • Docker • Kubernetes • GitHub Actions • AWS EC2 • JWT Authentication • RBAC • Agentic AI • RAG • AI Governance • Prompt Injection Detection • PII Redaction • Risk Scoring • MLOps

GitHub: <https://github.com/Vaibhavsable451/AegisAI-Enterprise-AI-Governance-Agentic-RAG-Platform.git>

Project #04 — AI Customer Support Agent Platform

Description: Enterprise-grade multi-agent customer support platform built with FastAPI, LangGraph, Groq, Pinecone, PostgreSQL, Kubernetes, and MLflow. Features intelligent query routing, RAG-powered support agents, automated ticket handling, confidence-based escalation, JWT authentication, observability, MLOps tracking, and production-ready CI/CD deployment. Designed using a scalable Agentic AI architecture with Router, Knowledge, Support, Billing, and Escalation agents.

Tech Stack: Python • FastAPI • LangGraph • LangChain • Groq Llama 3 • Pinecone • PostgreSQL • SQLAlchemy • MLflow • Docker • Kubernetes • GitHub Actions • Prometheus • Grafana • JWT Authentication • Agentic AI • RAG • MLOps

GitHub: <https://github.com/Vaibhavsable451/AI-Customer-Support-Command-Center>

Project #05 — Multi-Agent AI Research System

Description: A multi-agent AI system that automates end-to-end research workflows using LangChain and Groq LLMs with search, extraction, generation, and evaluation capabilities.

Tech Stack: Python • LangChain • Groq LLM • Streamlit • BeautifulSoup • Requests • Agentic AI • LLMs

GitHub: <https://github.com/Vaibhavsable451/Multi-Agent-AI-Research-System.git> | [Live Demo: https://multi-agent-ai-research-systemgit-iwmmnrqhttqezs2zxdhtuz.streamlit.app/](https://multi-agent-ai-research-systemgit-iwmmnrqhttqezs2zxdhtuz.streamlit.app/)

Project #06 — ML Sentinel — Autonomous ML Intelligence Platform

Description: An autonomous ML intelligence platform for customer churn prediction with data quality profiling, model benchmarking, drift detection, explainability, fairness analysis, model risk governance, automated retraining, and human approval gates.

Tech Stack: Python • Scikit-learn • FastAPI • Streamlit • Machine Learning • Model Governance • Drift Detection • Explainable AI • Fairness • SageMaker • AWS

GitHub: <https://github.com/Vaibhavsable451/ML-Sentinel-Autonomous-ML-Intelligence-Platform> | [Live Demo: http://3.208.162.120:8501/](http://3.208.162.120:8501/)

Project #07 — AI House Price Prediction System

Description: An end-to-end Machine Learning application that predicts house prices using supervised learning. Built with Python, Scikit-learn, and Streamlit, featuring data preprocessing, model comparison, EDA visualizations, real-time predictions, and downloadable prediction reports.

Tech Stack: Python • Pandas • NumPy • Scikit-learn • Random Forest • Regression • EDA • Streamlit • Plotly • Joblib • Machine Learning • Data Visualization • Jupyter Notebook

GitHub: <https://github.com/Vaibhavsable451/ai-house-price-prediction.git> | [Live Demo: https://ai-house-price-predictiongit-kmgbklloflzpqobtfj2pkz.streamlit.app/](https://ai-house-price-predictiongit-kmgbklloflzpqobtfj2pkz.streamlit.app/)

Project #08 — Agentic ATS Resume Generator

Description: An AI-powered multi-agent resume generation system that creates ATS-optimized resumes tailored to any job description using LangGraph, RAG with Pinecone, and Groq LLM. Features a self-correcting feedback loop for improved ATS scores and grounded content generation.

Tech Stack: Python • LangGraph • LangChain • Groq LLM • FastAPI • Streamlit • Pinecone • RAG • ReportLab • Agentic AI • Vector Database • REST API

GitHub: <https://github.com/Vaibhavsable451/Agentic-ATS-Resume-Generator>

Project #09 — AI Sales Intelligence Agent (29-Node Multi-Agent System)

Description: A 29-node Multi-Agent AI Sales Intelligence Agent built with n8n that automates website analysis, company research, AI-powered pain point detection, personalized sales email generation, HTML report creation, lead tracking, and real-time Slack notifications. The system integrates Groq LLaMA 3.3, SerpAPI, Gmail API, Google Sheets API, and Slack API to deliver an end-to-end AI sales automation workflow.

Tech Stack: n8n • Groq LLaMA 3.3 70B • SerpAPI • HTML5 • CSS3 • JavaScript (ES6) • Gmail API • Google Sheets API • Slack API • REST API • Netlify • Multi-Agent AI

GitHub: <https://github.com/Vaibhavsable451/AI-Sales-Intelligence-Agent> | **Live Demo:** <https://resdasales.netlify.app/>

Project #10 — Agentic AI YouTube Summarizer (Multi-Agent System)

Description: An Agentic AI-powered application that transforms YouTube videos into structured learning content. The system automatically extracts transcripts, analyzes key topics, generates concise and detailed summaries, and creates notes, Q&A, and quizzes using a multi-agent architecture powered by Groq LLaMA 3.3 70B and LangChain.

Tech Stack: Python • Streamlit • Groq LLaMA 3.3 70B • LangChain • YouTube Transcript API • Multi-Agent Systems • Generative AI

GitHub: <https://github.com/Vaibhavsable451/Agentic-AI-YouTube-Summarizer-Multi-Agent-System->

Project #11 — ResumeForgeAI – Multi-Agent ATS Resume Builder

Description: An AI-powered multi-agent resume generation platform that creates ATS-optimized resumes tailored to specific job descriptions. The system analyzes job descriptions, GitHub profiles, portfolio websites, and existing resumes to generate recruiter-friendly resumes, ATS score reports, keyword optimization suggestions, and downloadable PDF resumes using Groq LLMs and a multi-agent workflow.

Tech Stack: Python • Streamlit • Groq API • Llama Models • Agentic AI • Multi-Agent Systems • ATS Optimization • GitHub API • BeautifulSoup • ReportLab • PDF Generation • Resume Analysis

GitHub: <https://github.com/Vaibhavsable451/ResumeForgeAI-Multi-Agent-ATS-Resume-BUILDER-> | **Live Demo:** <https://resumeforgeai-multi-agent-ats-resume-builder-git-2wyenfbf3uef.streamlit.app/>

Project #12 — Q&A; AI Agent with RAG using n8n

Description: A no-code AI-powered Question & Answer system built using n8n, Google Gemini, Pinecone, and Google Drive. The platform implements Retrieval-Augmented Generation (RAG) to ingest documents, generate embeddings, perform semantic search, and provide context-aware answers through an intelligent AI chatbot with conversational memory.

Tech Stack: n8n • Google Gemini • Pinecone • RAG • Vector Embeddings • Google Drive • AI Agents • Semantic Search • No-Code Automation

GitHub: <https://github.com/Vaibhavsable451/Q-A-AI-Agent-with-RAG-using-n8n->

Project #13 — Multi-Agent AI Sales & Support System

Description: An AI-powered customer engagement platform that intelligently routes customer conversations to specialized Sales and Support AI agents. Built using a Supervisor Agent architecture, the system analyzes user intent, performs smart routing, and generates real-time responses for sales inquiries, technical support, refund requests, and customer assistance workflows.

Tech Stack: n8n • Groq • Llama 3.3 70B • AI Agents • Multi-Agent Systems • REST APIs • Webhooks • Customer Support Automation • Sales Automation • Agentic AI

GitHub: https://github.com/Vaibhavsable451/multi_agent_sales_support | **Live Demo:** <https://agentfd.netlify.app/>

Project #14 — Cricket Multi-Agent Factory (Supervisor + 6 AI Agents)

Description: Built a production-style Multi-Agent Cricket Intelligence Platform featuring a Supervisor Agent and six specialized AI agents: SCORE-X (live scores), STATX (player statistics), CHRONOS (fixtures & schedules), PULSE (cricket news), TACTIX (match analysis & predictions), and ARCHIVE (historical records). Integrated Groq Llama 3.3 70B, SerpAPI web search grounding, validation layers, and hallucination reduction mechanisms to deliver accurate, real-time cricket insights through an intelligent agent orchestration workflow.

Tech Stack: n8n • Groq • Llama 3.3 70B • SerpAPI • Agentic AI • Multi-Agent Architecture • Supervisor Agent • Prompt Engineering • Tool Calling • Workflow Automation • Hallucination Reduction • JavaScript

GitHub: <https://github.com/Vaibhavsable451/Cricket-Multi-Agent-Factory-Supervisor-6-Agents---Groq-v2>

Project #15 — Multivendor ecommerce platform

Description: A full-stack e-commerce platform with multi-role support (Admin, Seller, User) featuring JWT authentication, OTP verification, and responsive MUI/Tailwind design. Includes AI chatbot support and integrates Stripe/Razorpay payments.

Tech Stack: Spring Boot • React • TypeScript • Redux Toolkit • MySQL • JWT • Tailwind CSS • MUI • Formik • Axios • Stripe • Razorpay • Gemini API

GitHub: https://github.com/Vaibhavsable451/Ecommerce_multivendor.git | **Live Demo:** <https://ecommerce-multivendor-1.onrender.com/>

Project #16 — Employee Management System

Description: A full-stack Employee Management System built to efficiently manage employee records using complete CRUD operations. The application enables administrators to create, view, update, and delete employee details through a clean and responsive user interface. The frontend is deployed on Vercel and the backend is on Render, following modern cloud deployment practices with secure REST API communication.

Tech Stack: Java • Spring Boot • React • MySQL • REST API • Postman • AI Assistant

GitHub: <https://github.com/Vaibhavsable451/Employee-Management-System.git> | **Live Demo:** <https://employee-management-system-blond-eight.vercel.app/>

Project #17 — AI Resume Match & Job Recommender

Description: A full-stack AI-powered Resume Match & Job Recommender platform that analyzes resumes against job descriptions using Spring AI and Groq LLaMA 3 to generate ATS scores, match percentages, skill gap insights, and personalized improvement suggestions. The system supports intelligent resume parsing (PDF/DOC), job requirement extraction, and automatic cover letter generation through a modern glassmorphism dashboard interface. The frontend is deployed on Vercel and the backend on Render, following secure REST API-based cloud deployment practices.

Tech Stack: Java • Spring Boot • Spring AI • React • TypeScript • MySQL • Groq LLaMA 3 • REST API • Tailwind CSS • JWT • Postman

GitHub: <https://github.com/Vaibhavsable451/Resume-Anlayzer.git> | **Live Demo:** <https://resume-anlayzer.onrender.com/>

Project #18 — AI-Powered Fitness App

Description: A full-stack AI-driven fitness application built with Spring Boot microservices, Kafka, Keycloak, and React. Features include user activity tracking, AI-powered recommendations, event-driven communication, and secure OAuth2 authentication.

Tech Stack: Java • Spring Boot • Kafka • Keycloak • OAuth2 • React • MongoDB • MySQL

GitHub: <https://github.com/Vaibhavsable451/AI-Powered-Fitness-App-With-Spring-Boot-Microservices>

Project #19 — VibeCode Animated AI Website

Description: A cinematic AI-powered animated portfolio website built using Next.js with modern scroll-based storytelling techniques and Google Gemini-powered content workflows. The project demonstrates how AI-assisted design tools like Gemini, Google Whisk image generation, and Google Flow can be leveraged to create high-conversion brand identity websites featuring smooth scroll animations, interactive motion sections, and performance-optimized landing-page architecture. The site is deployed on Vercel with responsive UI and production-ready frontend engineering practices.

Tech Stack: Next.js • JavaScript • CSS • Gemini AI • Google Whisk • Google Flow • Scroll Animation UI • Vercel Deployment

GitHub: <https://github.com/Vaibhavsable451/vibecodeAnimated-Website.git> | **Live Demo:** <https://vibecode-animated-website.vercel.app/>

Project #20 — Prompt-Driven AI Chatbot Agent

Description: Developed an AI chatbot agent using a prompt-driven workflow that converts user input into structured responses through an automated pipeline (input → AI processing → UI rendering). The system demonstrates how modern AI tools can generate multi-step application behavior with minimal manual coding while maintaining real-time interaction and clean interface output.

Tech Stack: LLM API Integration • AI Workflow Builder (Google Opal) • Prompt-Driven Agent Design

Live Demo: <https://opal.google/app/1rh-gUMSzigdIN1cU8cNBUsm3q-ePb7BO>

Project #21 — KairoAI Chatbot

Description: KairoAI Chatbot is a fast, intelligent AI-powered chatbot that delivers real-time, accurate responses using modern AI APIs. It supports secure OTP-based authentication, multimodal inputs (text + image), and voice-enabled replies, all within a sleek and responsive UI. Both the frontend and backend are deployed on Vercel.

Tech Stack: HTML • CSS • JavaScript • Node.js • Express.js • Groq API

GitHub: <https://github.com/Vaibhavsable451/Ai-Chatbot.git> | **Live Demo:** <https://pl-tawny-one.vercel.app/>

Project #22 — 3D Portfolio Website

Description: Developed an interactive personal portfolio website with 3D-inspired visuals, responsive design, smooth animations, and modern UI to showcase projects and skills.

Tech Stack: HTML5 • CSS3 • JavaScript

GitHub: <https://github.com/Vaibhavsable451/3d-Portfolio-Website.git> | **Live Demo:** <https://3d-portfolio-website-kappa-kohl.vercel.app/>

Project #23 — AI Recruitment Email Intelligence Agent

Description: AI Recruitment Email Intelligence Agent is an automated workflow that fetches company emails from Gmail, classifies recruitment responses such as interview, selection, rejection, and offer emails using Groq LLM APIs, logs structured results into Google Sheets, and sends real-time alerts. Built using n8n workflow automation and LLM-powered classification, this system eliminates manual email tracking and improves job application management efficiency.

Tech Stack: n8n • Groq LLM API • Gmail API • Google Sheets API • Workflow Automation • AI Email Classification • Google Cloud

GitHub: <https://github.com/Vaibhavsable451/AI-Recruitment-Email-Intelligence-Agent.git>

Project #24 — Tech Release Monitoring Agent – Java & React (Groq AI + n8n)

Description: Tech Release Email Agent – Java & React (Groq AI + n8n) is an intelligent automation system that fetches the latest release information for Java and React from public APIs, processes and merges the data inside n8n, uses Groq LLM to generate concise technical summaries, and sends a formatted email notification through Gmail. The workflow is designed to help developers stay updated with important technology releases without manually checking changelogs and release pages.

Tech Stack: n8n • Groq LLM API • Gmail API • GitHub API • Workflow Automation • JavaScript • Google Cloud • AI Summarization

GitHub: <https://github.com/Vaibhavsable451/Tech-Release-Email-Agent-Java-React-Groq-AI-n8n-.git>

Project #25 — JOB FINDER AI AGENT

Description: Job Finder AI Agent is an end-to-end AI-powered job automation system that intelligently searches LinkedIn jobs, evaluates them against a candidate's resume using LLMs, generates personalized cover letters, and sends real-time Telegram alerts — eliminating manual job searching and repetitive applications. Built using n8n workflow automation, Groq LLM APIs, Google Sheets, and Telegram Bot integration, this system acts as a fully automated AI job discovery engine.

Tech Stack: n8n • Groq LLM • AI Agent • Google Sheets • Telegram Bot • Google Cloud • Automation

GitHub: <https://github.com/Vaibhavsable451/Job-Finder-AI-Agent.git>

Project #26 — Spring AI Chatbot

Description: Built an AI chatbot application using Spring Boot, Spring AI, React.js, and Groq-powered LLMs to enable intelligent conversational responses through a modern web interface. Implemented frontend-backend integration, REST API communication, markdown and code response rendering, and a clean chat UI with conversation history support. Both the frontend and backend are deployed on Render.

Tech Stack: Java • Spring Boot • React • Groq API • LLM • spring ai

GitHub: <https://github.com/Vaibhavsable451/Spring-AI-Build-Generative-AI-application-.git> | **Live Demo:** <https://aibuisl.vercel.app/>

Project #27 — Job Mail AI Tracker

Description: Job Mail AI Tracker is an n8n-powered automation workflow that automatically scans Gmail, uses Groq LLM to intelligently classify job emails as Rejection or Applied, labels them in Gmail, and logs every result to Google Sheets — building a real-time rejection and application tracker with zero manual effort.

Tech Stack: n8n • Groq LLM • Gmail API • Google Sheets • AI Classifier • Automation • Google Cloud

Project #28 — Job Finder AI Agent

Description: Job Finder AI Agent is an n8n-powered end-to-end job automation system that scrapes live job listings via HTTP Request, filters the top 10 matches, merges them with your Google Docs resume, uses Groq LLM and Google Gemini to evaluate fit, generates personalized cover letter emails — and automatically sends them directly to hiring managers via Gmail with zero manual effort.

Tech Stack: n8n • Groq LLM • Google Gemini • Gmail API • Google Docs • Apify • Automation • Google Cloud

Project #29 — Multi-AI Chatbot Agent Platform (Gemini + Groq + OpenRouter)

Description: A production-ready multi-LLM chatbot web application that integrates Gemini, Groq, and OpenRouter using n8n workflow orchestration and webhook-based communication. The system intelligently routes prompts across multiple AI providers and returns structured responses to a modern glassmorphism chat interface.

Tech Stack: HTML5 • CSS3 • JavaScript • n8n Workflow Automation • Webhook API • Google Gemini • Groq LLM • OpenRouter • Prompt Routing • Multi-Agent Architecture

GitHub: <https://github.com/Vaibhavsable451/Chatbot.git> | **Live Demo:** <https://chatbot-nine-phi-24.vercel.app/>

Project #30 — JARVIS – Real-Time AI Personal Assistant

Description: A real-time AI personal assistant built with Python capable of executing system commands, answering queries, automating keyboard and mouse actions, managing files, and storing persistent memory. Designed with a modular architecture for extensibility and real-world automation use cases.

Tech Stack: Python • AsyncIO • OpenAI API • Gemini API • Windows Automation • Keyboard Automation • Mouse Automation • JSON Storage

GitHub: <https://github.com/Vaibhavsable451/Advanced-Real-Time-AI-Personal-Assistant.git>

Project #31 — Dual AI Chat

Description: A multi-model AI chat application that enables users to compare responses from Groq Llama 3.3 70B, Google Gemini 2.5 Flash, and OpenRouter GPT-4o mini side-by-side in real time.

Tech Stack: Groq • Google Gemini • OpenRouter • Llama 3.3 70B • Gemini 2.5 Flash • GPT-4o mini • React • AI APIs • LLMs

Live Demo: <https://twin-chat-guide.lovable.app/chat/fa050b7e-136e-43c4-9e66-6d353f45f213>

Project #32 — COVID-19 Data Analysis Using Python

Description: Data analysis and exploratory data analysis project developed during the Data Science Internship at IStudio. Analyzed COVID-19 data using Python, Pandas, NumPy, Matplotlib, and Seaborn to identify trends and derive insights across continents. Performed data cleaning, missing-value handling, duplicate removal, date-time processing, filtering, aggregation, feature engineering, and statistical analysis. Created visualizations including histograms, scatter plots, pair plots, and bar charts, and exported processed data for further analysis.

Tech Stack: Python • Pandas • NumPy • Matplotlib • Seaborn • Data Analysis • Exploratory Data Analysis • Data Cleaning • Feature Engineering • Data Visualization • Statistical Analysis

GitHub: <https://github.com/Vaibhavsable451/Project-Internship>

Project #33 — TalentFlow AI – Multi-Agent Recruitment Automation System

Description: An end-to-end multi-agent AI recruitment automation platform built with n8n that streamlines the hiring workflow from resume and job description analysis to ATS scoring, semantic candidate search, and automated recruiter email generation. The system orchestrates multiple AI agents using Google Gemini, Groq, OpenRouter fallback routing, Pinecone vector search, and Gmail API to deliver an explainable, production-oriented recruitment pipeline.

Tech Stack: n8n Workflow Automation • Google Gemini • Groq LLM • OpenRouter • Pinecone Vector Database • Webhook API • JavaScript • AI Agents • Multi-Agent Architecture • Prompt Engineering • ATS Scoring • Semantic Search • Gmail API • REST APIs

GitHub: <https://github.com/Vaibhavsable451/TalentFlow-AI.git>

Project #34 — AI Data Science & LLM Studio

Description: AI Data Science & LLM Studio is an end-to-end AI engineering platform built with Python and Streamlit that integrates the complete machine learning workflow into a single application. It enables data preprocessing, exploratory data analysis (EDA), feature engineering, machine learning model training and evaluation, deep learning with PyTorch, Retrieval-Augmented Generation (RAG) using LangChain and Pinecone, and a multi-LLM chatbot supporting Google Gemini, Groq, and OpenRouter. The project demonstrates a production-oriented AI workflow from raw data processing to intelligent conversational AI within one interactive platform.

Tech Stack: Python • Streamlit • Scikit-learn • PyTorch • Pandas • NumPy • Matplotlib • Plotly • LangChain • Pinecone • Google Gemini • Groq • OpenRouter • Machine Learning • Deep Learning • Retrieval-Augmented Generation (RAG) • Vector Database • Prompt Engineering • LLMs

GitHub: <https://github.com/Vaibhavsable451/AI-Data-Science-LLM-Studio> | **Live Demo:** <https://ai-data-science-llm-studio-7eppgxdehbjgwd3gewgtgr.streamlit.app/>

Project #35 — Veylix — AI-Powered Code Editor

Description: Veylix is an AI-native code editor designed to bring agentic AI directly into the software development workflow. Built with React, Monaco Editor, FastAPI, WebSockets, LangChain, LangGraph, MCP, and RAG, it enables developers to understand codebases, retrieve relevant context, generate and modify code, execute Python, analyze errors, interact with project files, and iterate through an intelligent development workflow. The platform supports multiple AI providers including Groq, Google Gemini, and OpenRouter, along with real-time AI streaming, Copilot-style ghost text, codebase search, linting, Git integration, code diffing, an integrated terminal, and AI-powered developer tools.

Tech Stack: React • Monaco Editor • FastAPI • Python • WebSockets • LangChain • LangGraph • MCP • RAG • FAISS • Sentence Transformers • Groq • Google Gemini • OpenRouter • AI Agents • LLMs • Code Execution • Real-Time AI Streaming • Git Integration

GitHub: <https://github.com/Vaibhavsable451/Ai-Code-Editor> | **Live Demo:** <https://ai-code-editor-frontend.onrender.com/>

Project #36 — AI Finance Assistant Agent

Description: AI Finance Assistant Agent is an intelligent personal finance automation system built with n8n, Groq, Google Sheets, Gmail, and a custom HTML/CSS/JavaScript chat interface. Users can naturally log expenses and income, analyze spending patterns, view transaction totals and category insights, and receive automated email confirmations and finance summaries. The AI agent uses Groq for reasoning and tool calling, while n8n orchestrates the workflow between the chat interface, Google Sheets transaction ledger, and Gmail. The project demonstrates practical agentic AI, workflow automation, tool calling, session-based conversations, and real-world financial data management.

Tech Stack: HTML • CSS • JavaScript • n8n • Groq • Qwen • Google Sheets • Gmail • AI Agent • Tool Calling • Workflow Automation • Webhook • Chat Memory • Prompt Engineering • Personal Finance • Agentic AI

GitHub: <https://github.com/Vaibhavsable451/FinPassbookAI.git> | **Live Demo:** <https://fin-passbook-ai.vercel.app/>

Project #37 — Resume Intelligence & ATS Optimizer

Description: Resume Intelligence & ATS Optimizer is an AI-powered resume analysis platform built with HTML, CSS, Vanilla JavaScript, Python, and the Groq API. It evaluates resumes against job descriptions, generates ATS scores with detailed subscores, identifies skill gaps, rewrites resume bullet points using the STAR methodology, and provides job match recommendations. The platform also includes resume parsing, an offline heuristic fallback, OTP-based access verification, and a production-ready Vercel deployment. The project demonstrates practical Generative AI integration, prompt engineering, resume intelligence, API integration, frontend engineering, and AI-powered career automation.

Tech Stack: HTML • CSS • JavaScript • Python • Groq API • Llama • Qwen • Resume Parsing • ATS Optimization • Prompt Engineering • AI Career Assistant • Skill Gap Analysis • STAR Methodology • REST API • OTP Authentication • Vercel

GitHub: <https://github.com/Vaibhavsable451/Resume-Intelligence-ATS-Optimizer.git> | **Live Demo:** <https://resume-intelligence-ats-optimizer-zeta.vercel.app/>
